Sunday, Sept. 1, 2024 – Viewing of Cattle
Monday, Sept. 2, 2024
12 Noon Cattle sale
Lunch will be available

Sale Staff:

Gene Steiner, Auctioneer 513-616-4086
Corbin Cowles, AHA. 270-991-2534
Derik Steiner 513-616-4086
Chris Wojo 540-292-0841
C.J. Furlong 717-989-8780
Matt Bauerlein 410-215-5008

Motels: All in Frederick, MD

Motel 6 301-622-5141
Comfort Inn 301-662-0281
Hampton Inn 301-696-1565

Airports:

BWI, Dulles, Reagan National.
All approximately 45 minutes.

Directions to the Farm:

Address: 10718 Liberty Rd., Frederick, MD 21701
From Frederick: Take U.S. 15 North to Route 26 East, go through town of Mt. Pleasant. Our farm will be on the left past the Liberty Road Seafood Restaurant. Will be marked with sale signs.
From Baltimore: Take 695 to 70 West to Exit 62 (Rt. 75 North) to Rt. 26 West. Go about five miles. You will see a golf driving range on the right. Our farm is directly behind the golf driving range. Go about one block and you will see our farm sign at the end of the driveway on the right. Turn in driveway, go to split, bear right. Will be marked with sale signs.

• Wow an own son of the breed changer, Roth Rose Garden cow. Rose Garden topped the Roth Dispersal, selling to Mohican West. BB has been a sleep all night calving ease sire with a CE in the top 16% of the breed. The first BB Daughter in production have outstanding udders as shown by his MM of 33 (Top 13% of the breed) we hate to see BB leave, but we have a lot of his daughters and it is time to move him to another herd. He has produced many offspring here at East Side Farm, he has been MDF, DLF, IEF, HYF, MSUDF and DB tested and is free on all. If you are looking for a gentle and a great disposition bull, he is your bull.

- Maternal power in a pretty package!
- With the cow families behind this one, she'll easily be a favorite once she matures. Maternal strength top and bottom, power and performance. Something not to like here and a brood cow waiting to happen. We have kept back most of our Keeneland daughters, so this is a rare chance to take one home.

Lot 31 — HCC FINAL DRAW M130

31 **HCC FINAL DRAW M130** {MDF,DBC}

STEER Calved: **3/7/24** — Tattoo: **BE M130**

Sire: MARBENS Keeneland H29

- We know there are families out there looking for quiet show steers for their youngsters, but also need them to feed out, make the sale, and still look the part in the ring. This guy should tick all those boxes!
- An early March calf, he should suit quite a few different county fair dates.

Lot 32 — HCC RAVEN SUE M46

32 **HCC RAVEN SUE M46** {HYP,MDF,DBC}

- We bought M46's dam out of the East Side sale from our friends at Black River Farm because we just love how the "Gus" daughters perform.
- Using the Equinox bull on them sure does add in some extra look. This heifer has the sleek front end and cool profile to get along in today's show ring, but the pedigree behind her to make us confident of her future as a breeding piece.
- Pictured before she was weaned, she'll make an impression on sale day!

- Wishful had success in the show ring and certainly has proven herself as a cow!
- A "Gus" daughter out of the favorite Marben cow family going back to their Barbara.
- We try to bring one good cow to this sale every year, and she only sells to make room to retain some heifers. She consistently weans off one of our heaviest calves, as you can see with her steer calf selling in this sale.
- Great uddered, super disposition, you'll want a whole herd like her.
- Pastured exposed to Marbens Keeneland. Confirmed bred for a spring 2025 calf.

Lot 33 — JR HCC CELESTIAL M116

- The Equinox bull on "Gus" cows has been a great mating for us and we think M116 will prove that true again.
- Fancy enough to play with in the show ring, but you'll appreciate her most as a cow.
- A pedigree that offers something a little different than a lot of what is popular today and gives you options in a breeding program.

Lot 34A — HCC OLLIE M118

34A **HCC OLLIE M118** {DBP}
STEER Calved: 2/26/24 — Tattoo: BE M118

Sire: MARBENS Keeneland H29

- The definition of a pet, this steer just wants a kid to love on him all day long!
- Stout and fancy enough to show, perfect for a first time showman. He takes everything in stride and stays kitten quiet.
- Born end of February so should suit a variety of fair dates.

- Kelly is my last from a line that went back to another solid Embassy cow I purchased from the Horner's to complement the Renee Family. After very few heifer calves, this year I decided to offer her as well. Kelly was shown as a heifer and did well and as a cow has done well on her previous two steer calves and this year her first heifer is not disappointing. The Small Town Kid mothers I've had all milked well and give you the broodiness that she shows.
- Pasture exposed to my bull Rancher from 4/29/24 to 8/1/24. Will be preg checked prior to sale.

- Here is a really dark, feminine and broody bred heifer coming out of my Taryen Family. Madelyn is the second calf out of this Tracy cow and with one in production, I am offering her in the sale today.
- Her maternal sister is raising one heck of a bull calf and how the Rancher 2-year-olds are looking she will fit right into any program.
- Bred AI on 6/1/24 to Church Hill Sensation 2504 and has since passed over.

Lot 54 — WCC DOLLY

TERMS and CONDITIONS:

Cash or check. Each animal will be sold to the highest bidder. The auctioneer will settle any dispute as to bids.

All cattle are to be paid for by the purchaser immediately after the sale.

Each animal will be at the purchaser's risk immediately after the animal is sold. They will be fed and cared for free of charge for a reasonable length of time after the sale, but at the purchaser's risk and will not be turned over to the buyer or shipped as he may direct. Buyers can have them insured against risk at a nominal rate.

The animals will be transferred to the buyer at the seller's expense. Cattle will not be transferred until paid in full. Each buyer must be sure to give the clerk his proper name and address for making transfers. All calves born before the sale

are to be registered by the seller; all calves born after the sale are to be registered by the purchaser. Proper breeding statements will be signed by the seller for the buyer to use in registering calves after the sale. The purchaser will be responsible for obtaining AI certificates to register calves resulting from females carrying the service of bulls not owned by the seller.

Animals sold in this sale are guaranteed by the owner to be breeders on the condition that they are properly handled and cared for by the purchaser. If any animal fails to breed and the animal is in sound, healthy condition, the buyer may return it to the seller who shall have six months to test it. If the animal proves to be a non-breeder, a satisfactory exchange will be made or the purchase price will be refunded.

Every known blemish will be called before the animal is sold and no animal will knowingly be sold that is not sound in every way. Any changes in breeding dates will be announced sale day.

Any female selling with calf at side is considered to be a breeder with no further guarantee in this regard.

Health papers will be provided.

Announcements at the sale ring by the owners or the auctioneer concerning the cattle will take precedence over statements in the catalog.

All persons who attend the sale do so at their own risk and the owners assume no liability, legal or otherwise, for any accidents that may occur.

EAST SIDE FARM — Jay and Shelly Stull Family

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and \$ indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7

centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility (SCF)

The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to

1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown

to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldie Maternal Index (BMIS)

The Baldie Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

HOW TO CREATE YOUR HIBID ACCOUNT:

1. Go to www.genesteinermanagement.hibid.com/auctions
2. Click login/new bidder at the top of the current auctions screen.
3. Click on the “Don’t have a HiBid account? REGISTER HERE”
4. You will be asked to enter your email and confirm your email. Each email can only have one account.
5. Next enter your personal information and create a user name and password.
(Please keep your password in a safe place that you can find it. Password is case sensitive.)
6. Once you have created an account you will be able to login to your new account.
7. Once you have registered to bid you will be asked to register for each individual auction. (Not each lot).
8. At this time you will be asked to register with a credit card to verify your identity.
We will not charge your credit card unless you fail to show up for the scheduled pick up.
9. HiBid charges a 2% buyer’s premium, which is added to the buyer’s invoice.
